Slides: bit.ly/nctm23dc

Thinking Task #1:

What **could** be the area of a rectangle, given that its perimeter is 24?

DESMOS

Slides: bit.ly/nctm23dc

x_1	y_1
11	1
10	2
9	3
8	4
7	5
6	6
8.5	3.5

DESMOS

$$y_1 \sim ax_1 + b$$

STATISTICS

$$r^2 = 1$$

$$r = -1$$

PARAMETERS

$$a = -1$$

$$b = 12$$

RESIDUALS

e_1

$$Y = -X + 12$$

Slides: bit.ly/nctm23dc

Typical Math Text Problems

Find the perimeter of each rectangle.

1)

2)

3)

Depth of Knowledge (DOK)

DOK Level 1

Recall

Basic recall of info such as facts, definitions, or using a formula.

DOK Level 3

Strategic Thinking

Reasoning, planning, using evidence, higher level of thinking.

DOK Level 2

Skills & Concepts

Complete multiple steps in order to find a solution to a problem.

DOK Level 4

Extended Thinking

Complex reasoning, developing or thinking over a period of time.

Thinking Classroom

Thinking Task #2:

What **could** be the perimeter of a rectangle, given that its area is 60?

Slides: bit.ly/nctm23dc

One Inspiration for Today's Topic

Problem in the textbook:

Anya has 12 seashells. She gives 5 seashells to a friend. How many seashells does she have left?

Sonali's version:

Anya has 12 seashells. If she gives some to her friend and keeps some for herself, how many **could** she give away and how many would she have left for herself?

Typical Math Classroom

- Lacks creativity and imagination
- Students follow teacher directions (mimic)
- One preferred (teacher) path to a solution
- Fastest students get the attention
- All about answer-getting
- Low engagement

A Better Math Classroom

- Student-centered
- Builds on what students already know
- Allows for creativity
- Allows for multiple pathways to solutions
- Respects and honors the voice and mathematical thinking of **ALL** students

Math is ...

Beautiful

Creative

FUN!

Inviting

Mysterious

Think different.

Teach Differently than you were taught

1. Eliminate “I do, we do, you do”
2. Fewer topics, More depth
3. Don't *cover* math – *uncover* it instead
4. Rethink homework, traditional assessments
5. Make math more meaningful and enjoyable
6. Regularly use non-curricular math tasks
7. Take daily “field trips” outside of the textbook
8. Use technology where appropriate

Thinking Task #3:

If the graph of a linear equation passes through the point $(3, -2)$, what **could** be the equation of the line?

Slides: bit.ly/nctm23dc

Thinking Task #4:

If the graph of a linear equation passes through the point $(-4, 1)$ and has a positive y-intercept, what **could** be the equation of the line?

Slides: bit.ly/nctm23dc

Thinking Task #5:

If the solution to a system of two equations is $(-3, -5)$, what **could** be the two equations in the system?

Slides: bit.ly/nctm23dc

Thinking Task #6:

If the volume of a right cylinder is 72π cubic cm, what **could** be the dimensions of the cylinder?

Slides: bit.ly/nctm23dc

Thinking Task #7:

If the midpoint of two given points is $(2, -5)$, what **could** the coordinates of the two points?

Slides: bit.ly/nctm23dc

Thinking Task #8:

If the area of a right triangle is 30 square units, what **could** the hypotenuse of the triangle be?

Slides: bit.ly/nctm23dc

Thinking Task #9:

A jar contains blue and red marbles, such that the probability of selecting a blue marble at random is $\frac{2}{5}$. What **could** be the number of blue and the number of red marbles in the jar?

Slides: bit.ly/nctm23dc

Thinking Task #10:

A jar contains blue and red marbles. If you draw two consecutive marbles, without replacement, the probability that they are both red is $\frac{1}{3}$. What **could** be the number of blue and the number of red marbles in the jar?

Slides: bit.ly/nctm23dc

Let's Write a New Problem #1

Simplify each expression.

$$1) (5p^2 - 3) + (2p^2 - 3p^3)$$

$$14) (9r^3 + 5r^2 + 11r) + (-2r^3 + 9r - 8r^2)$$

Let's Write a New Problem #2

Find the distance between each pair of points.

10) $(8, 5), (-1, 3)$

11) $(-10, -7), (-8, 1)$

Let's Write a New Problem #3

Given the first term and the common difference of an arithmetic sequence find the first five terms and the explicit formula

$$11) a_1 = 28, d = 10$$

$$13) a_1 = -34, d = -10$$

Get Our Favorite Problems

Take The Online Workshop

Directions: Using the digits 0 to 9 at most one time each, fill in the boxes to write three equations whose solution is $-1/2$.

$$\boxed{}x + \boxed{} = \boxed{}x + \boxed{}$$

Directions: Using the digits 1 to 9 at most one time each, place a digit in each box to list the dimensions of a rectangular prism and rectangular pyramid so that both shapes have equal volumes.

Directions: Using the digits 0 to 9 at most one time each, place a digit in each box to create a true statement.

$$\frac{\square(x + \square)(x - \square)}{\square(x^2 + \square x - \square\square)} = \square$$

Directions: Using the digits 1 to 9, at most one time each, to fill in the boxes to make each expression evaluate to a perfect square number.

$$18 \times \square \times 2$$

$$\square \times 14 \times \square$$

$$\square \times 15 \times 3$$

$$2 \times \square$$

$$6 \times \square \times 2 \times \square$$
